

Project Vision

We are creating an application targeting newly arrived who wants to learn how to pronounce swedish letters and sounds. The application will be easy to understand with knowledge in neither Swedish nor English. The application(name) is a language support application that focuses on being easy to use and fast to learn for everybody, no matter the level of education and language knowledge. Our application is different from other applications on the market in the way that our application is focusing solely on the pronunciation of Swedish letters in different circumstances.

We are six people working on the application until october 19.
